Subject: MGSE Review

Elliott,

I talked to Mike and Martin about this review. I will lead it. We all agree that we should limit this to the equipment needed to integrate the LAT. We will review shipping containers, environmental test fixtures, etc. at a latter date. This still leaves s large amount of hardware to be reviewed. We expect to review the general designs, the status of analysis, drawings etc. and approve the purchase of long lead items. I expect to see a timeline for getting from now to integration of the first tower. The review, as planned, will take the weekly I&T time slot 10:30 to 12:00 on Thursday February 5. Martin has already sent out a notice. Eric will post the charts and make sure that Mike Lovellette has the address. Lowell
