

A full (sampled) day of background: 38 M incoming particles

864 jobs run on the UW condor farm

Each job is 1 second, from 1.5 to 2.5 days after launch

Defined by DataChallenge v2r5, GR v7r0p1

- Create incoming using generate_incoming.txt, run number same as second number
- Process with process_incoming.txt
 - Trigger: TKR+CALHE+ACDH
 - no deadtime applied
 - Apply Onboard filter
 - Save only tuple
