

# System Tests Report – Jan 16

Engineering Model – Not yet run the systests for v3r0407p1em0 as the DB expects the version to be less than 10 characters long. In general, it would be useful if our version convention allowed for easy sorting (so that “ls” puts the most recent version at the top or bottom of the list).

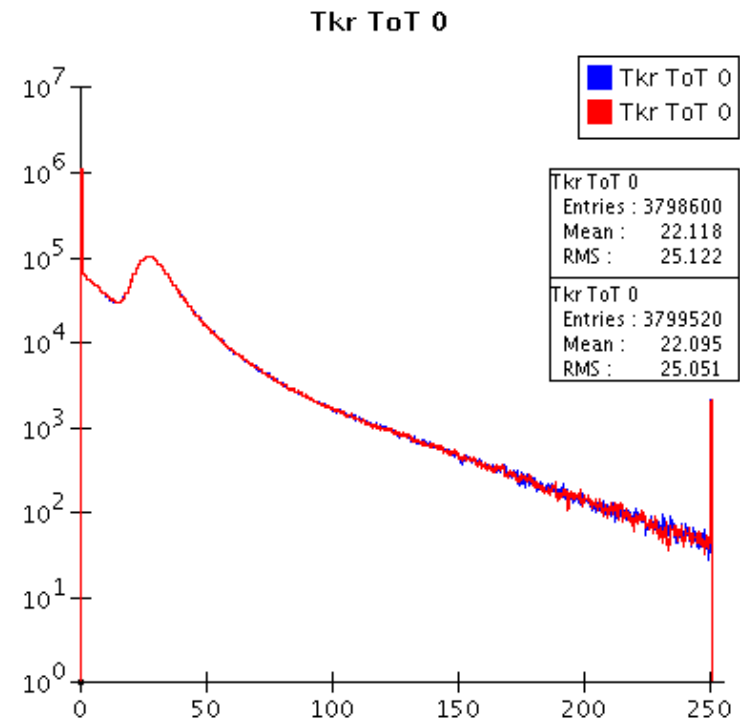

GlastRelease – No new releases since v5r0p2 (the switch to the new G4).

# ToT

## 10 GeV Gamma

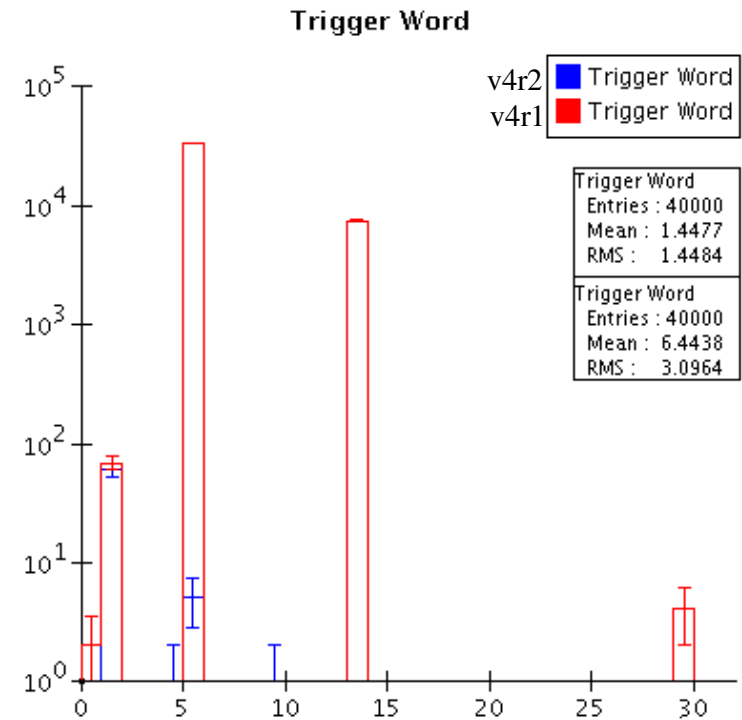

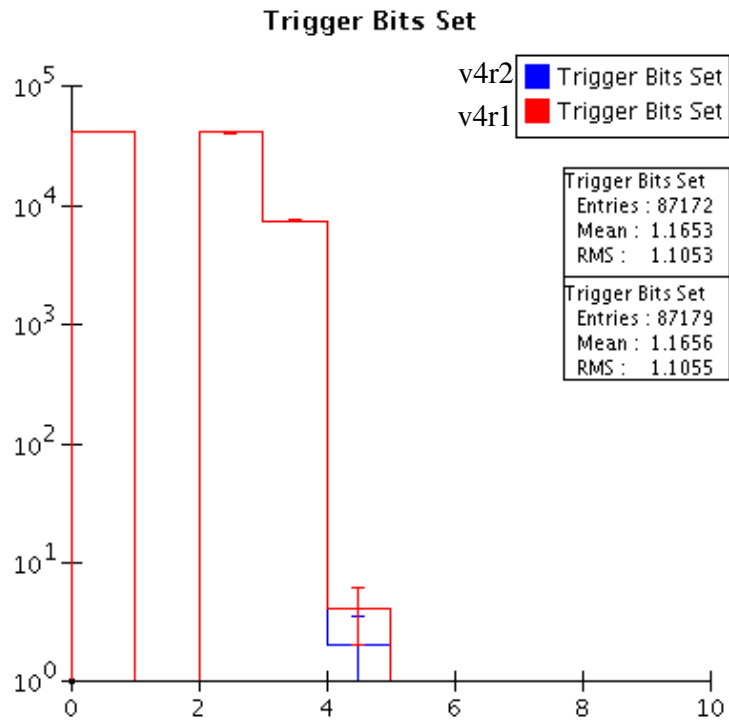

## Muon

Borrowed histo definition and code from Michael Kuss's analysis package.

# Triggers and Filters

## 1 GeV Proton

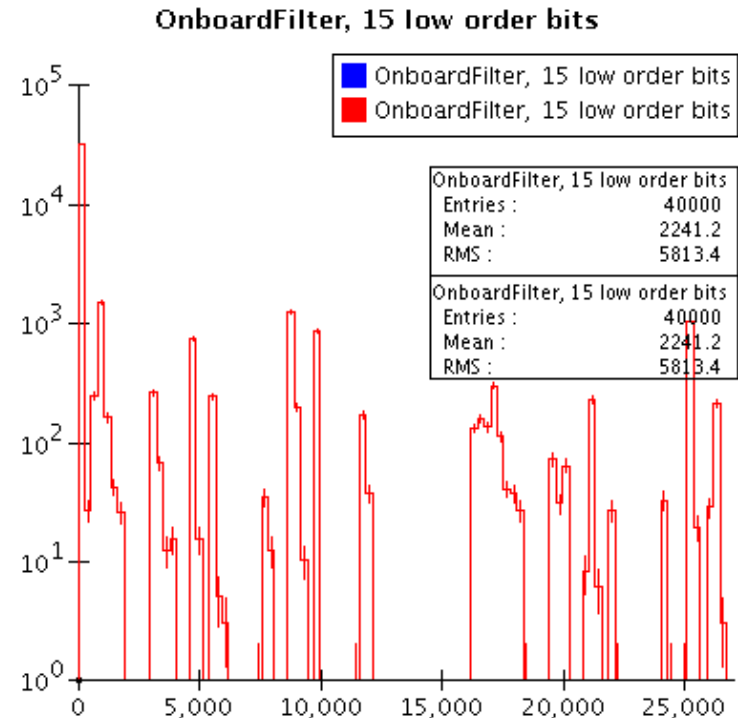

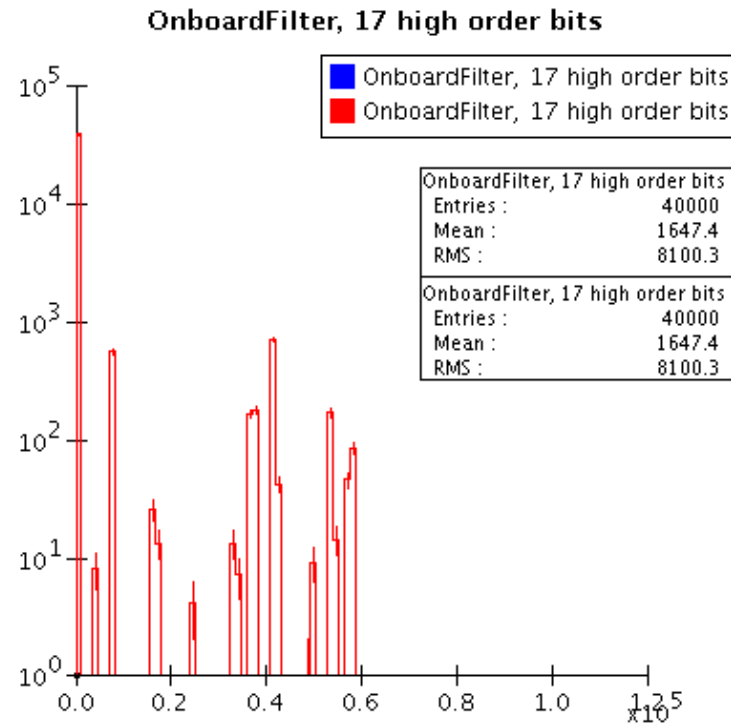

Do we want anything else?

Trigger per tower/layer? (would this be more informative than hits/tower?)

# OnboardFilter

## AllGamma

- This would be a lot more useful if it showed the distribution of bits set, rather than the status word.
- The FilterStatus word is not stored in any of the main root trees (I had anticipated that it might be somewhere near L1T in the digi file).
