Significant Preship NCR Status

- **NCR 855 – LATC Verify Errors**
 - **None observed at NRL**
- **NCR 880,809,901,881 and 902 - CPU reboots**
 - **None observed at NRL**
- **NCR 897 – FPGA**
 - **Under analysis at Vendor**

EMI/EMC NCRs

- **NCR 932 – Tracker noise**
 - **Eric Grove to discuss**
- **NCR 939 – RTD interference**
 - **Small disturbances on the RTD sensors was seen during RS testing, but was not sufficient to affect LAT Thermal Control (LTC) operations**
 - **The disturbances were bigger on the CS102 tests (8 degrees peak to peak)**
 - **Working issue with Fred – looking at S/C CE at these points to see how much margin we have**
 - **May do some additional CS testing after we look at all of the data sets**

Data Flow During EMI/EMC

- **Several NCRs written on Data Flow during EMI/EMC.**
 - Many due to the use of a bigger magnifying glass, and are not related to EMI/EMC
- **NCR 933 1PPS dropout**
 - 2 of 4 happened when no EMI signals were being generated
 - 1 was CS, the other RS at entirely different frequency ranges
 - Larry to research history to get better rate statistics
- **NCR 936 SIU timeout on CTDB (1553 bus)**
 - One instance during a startup. No EMI signals were being generated. Also saw 1PPS dropout
- **NCR 937 Missing datagrams**
 - 6 of 6 instances due to ground processing, last part of a run comes through after LICOS has stopped the run and are allocated to the next run
- **NCR 938 Missing telemetry packet**
 - 4 instances, none were seen when EMI signals were being generated
 - Have seen prior instances when the script checks for telemetry too soon
