## Accomplishments for February 2007

---

- **Attended the First GLAST Symposium. This went well, we were able to get great comments back from team members on the GLAST Model.**
- **Aurore Simonnet created version 2 of the model. It now has instructions for constructing it and these are being tested right now. We expect to send out test samples with in the next two weeks.**
- **Tim Graves our long time Instructional Technology consultant has left the E/PO group. We are now in the middle of replacing the computer portion of his position with a temporary Systems Administrator.**
- **We met with Dan Reichart of the PROMPT telescope network to discuss the future collaboration between the Skynet robotic telescope network and the GTN. Dan and his group will soon take on the task of archiving data for the GTN and being the primary network that all GTN telescopes are controlled on.**
- **Kevin Mclin – formerly just a consultant at the E/PO group and a lecturer in the Physics and Astronomy Dept. at SSU – will now take over the GTN communications between GTN scopes and scientists.**

# Variance Report

---

- **We have put in place many of our contracts for FY07 and hopefully going to continue receiving funds so we don't run out again.**
- **No impact at this time, we have been making great progress with everything.**
