May 2007 Month End  
4.1.C EPO**

# Accomplishments for May 2007

---

---

- Active Galaxy Pop-up book is now approved by NASA Product review:
  - Further approval will now be sought from NASA HQ in order to distribute this product.
- Solar Supernova has been revised and is back in test.
- Comments have been received about the GLAST Model but more are still needed, please download from:  
<http://glast.sonoma.edu/materials.html>
- Sarah Silva and Phil Plait have both departed for other positions. Kamal Prasad has been hired, he started 6/4.
- Internet problems to GORT are now fixed (we think.) We had to replace some of the routing boxes.
- Our new webserver has now been ordered.
- E/PO article written for LAT and HEAD newsletters.

# Accomplishments for May 2007

---

---

- Night Sky Network “Extreme Universe” toolkit for amateur astronomers – being developed in partnership with Astronomical Society of the Pacific
  - ASP folks came to SSU and we reviewed their draft activities. Extensive comments were provided. These activities look good, for the most part, and are now in alpha test at other locations.
- GLAST MySpace site and blog – now 181 friends! Kamal Prasad is taking over maintenance of this page: <http://myspace.com/glast>
- Black Hole planetarium show:
  - Special event happened on May 19 – goal was to take data on what people have learned from the show. This did not happen due to technical problems. We expect them to take the data in June and send it to us. A questionnaire was developed based on the misconceptions that teacher usually have in our workshops. This completes our subcontract with Chabot.
- Amendment 28 and 29 are now received at SSU. Thanks! This funds us through FY07. We are putting the funds into budget categories, so next month I should know where we stand. However, we would like to make sure we can get a no-cost extension through 12/31/07 at least, to cover launch in case the FY08 funds don't show up in time.
